

**Question 1**

For the function  $f(x)$  depicted below graph  $y=f(x-2)$

**Question 2**

The cost,  $C$ , (in cents) to produce  $x$  ounces of glitter can be expressed as  $C=f(x)$ . Explain the meaning of  $f'(55)=-22$

**Question 3**

Find the derivative of the following function.  $y=4\sqrt{x^6}$

**Question 4**

Find the derivative of the following function:  $y = \ln(4t^5+3)$

**Question 5**

The cost to produce  $q$  items is  $1500 + 10q + 20q^2$  dollars. Find the marginal cost to produce the 15th item.

**Question 6**

The cost (in dollars) of producing  $x$  items is given by  $C(x)=0.05x^2+22x+5500$

a) Find the marginal cost function

$$C'(x)=$$

b) Find  $C(50)$  and  $C'(50)$

$$C(50)=$$

$$C'(50)=$$

**Question 7**

At which point is the derivative largest?

**Question 8**

Find the derivation of  $5x^2+25x-3$ .

**Question 9**

Find the derivative of  $(e^x)(3+x)^{1/3}$

**Question 10**

The total cost of producing twenty pairs of shoes is \$400. The marginal cost of producing the twenty-first pair of boots is \$83. We can conclude that the average:

- a.
- b.
- c.
- d.

**Question 11**

Petco has a tank full of 3000 goldfish. The number of goldfish  $x$  years later is  $P(x) = 3000e^{(-.4x)}$ . Find the average population in the third year.

**Question 12**

The time to get to class,  $T$ , (in minutes) is a function of the amount of students also walking near you on your way to class. If there are  $S$  students walking when the time is  $T=c(s)$  explain what  $c'(4000)=0.04$  means?

**Question 13**

Find the equation of the tangent line to  $f(x) = \ln x$  at the point where  $x=3$

**Question 14**

If  $f(1) = -2.65$  and  $f'(1) = -.005$ , what is a good estimate for  $f(2)$ ?

**Question 16**

Find the equation for a function whose graph is obtained by vertically stretching the graph of  $y = x^3$  by a factor of 6 and then horizontally shifting it to the left by 3 units.

**Question 17**

If  $N$  is the average number of species found on an island and  $A$  is the area of the island, observations have shown that  $N$  is approximately proportional to the square root of  $A$ . Write a formula for  $N$  as a function of  $A$ .

**Question 20**

The graph of  $C(q) = q^2 + 2q + 5$  has a slope 8 at  $q=1$ . At what other point is the slope 8?

**Question 21**

Find the derivative of the following function:  $y = (3x^2 + 7)^7$

**Question 22**

Are the following functions power functions? If so give the values of  $k$  and  $p$ .

1)  $y = 2/x^3$

2)  $y = 2^x$

3)  $y = (5x^4)^2$

**Question 23**

The quantity,  $Q$ , in tons of material at a landfill is a function of the number of decades years since 2005, with  $Q = f(t) = 5t^2 + 400$

Find  $f(10)$ ,  $f'(10)$ , and the relative rate of change  $f'/f$  at  $t=10$ .

$f(10) =$

$f'(10) =$

$f'/f =$

**Question 24**

The cost to produce  $x$  items is  $C(x) = 500 + 5x^2$

Find the marginal cost of producing the 15<sup>th</sup> item. Interpret your answer in terms of costs.

The marginal cost of producing the 15<sup>th</sup> item is \$\_\_\_\_\_

This means that the cost of production \_\_\_\_\_ (increases/decreases) by about \$\_\_\_\_\_ when one additional unit is produced.

**Question 25**

For the function  $f(x)$  depicted below, graph  $y=2f(x)$

**Question 26**

Find the derivative of the following function.

$$y = (x^3 + 10)^5$$
